The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 5 and 6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

On line 3 of claim 5, "said inlet chamber" lacks antecedent basis. It is suggested that the dependency of claim 4 be changed to claim 3 to correct the error.

On line 3 of claim 6, "the outlet chamber"

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Dixon.

With respect to claim 1, Dixon discloses a modified lubricant pan assembly 10 (see FIGS. 1-2) and an external spin-on-off lubricant filter canister 16 removably connected to the pan. The limitations to the transmission relate to intended use and carry no patentable weight.

As to claim 2, Dixon discloses the pan as having a wall 28 having internal and external surfaces and a filter adapter (e.g., a portion of the wall supporting parts 23 and 32) fixedly secured within the wall between the internal and external surfaces (e.g,

because it is unitary therewith), the adapter including a threaded pipe nipple (e.g., the external end of part 24), a lubricant entry port 32, and plenum (e.g., defined by part 18 and gasket associated therewith), and a filter canister sealing surface (also defined by part 18).

Concerning claim 3, Dixon discloses the pan as including an inlet chamber (e.g., defined by part 32) and an outlet chamber (e.g., defined by part 24) both fixedly attached to the internal surface of the wall of the pan.

Regarding claim 4, Dixon discloses the pan as including a lubricant pick up assembly 32 and a lubricant discharge tube 24.

Claims 4 and 5 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Streicher et al discloses a cup portion 1 for a lubricant pick up tube.
